

Keyboards

The Essential Range of Computer Accessories

Anti-Bacterial • WATERPROOF KEYBOARD

Washable & Fully Submersible Keyboard

FEATURES

- High quality, stylish keyboard
- Ergonomically designed for comfortable use
- Durable keys, 10 Million keystroke life
- Plug & play set-up
- Compatible with Windows:
XP/2000/2003/ME/98/Vista

An antibacterial coating has been added to this keyboard containing a material known as Triclosan, which inhibits the growth of micro-organisms such as algae and bacteria, by using an electro-chemical mode of action to penetrate & disrupt their cell walls.

When the cell walls are penetrated, leakage of metabolites occurs and other cell functions are disabled, thereby preventing the micro-organism from functioning or reproducing. Triclosan, is widely used in a variety of applications. It is the ideal product to guarantee hygienic properties for many finished goods, like: cosmetics, tooth pastes, shoe insoles, mats, hospital supplies and others, it's considered safe for human and the environment.

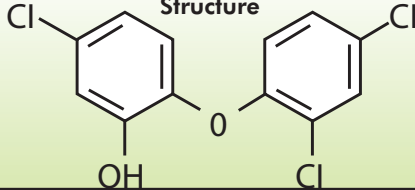

Chemical name

2,4,4'-trichloro-2'-hydroxy-diphenyl-ether

CAS number

3380-34-5

Structure

Reasons to choose an Anti-Bacterial product:

The common cold can be caused from more than 200 different types of viruses. Due to continuing mutations the body cannot build up resistance against such a diverse set of constantly changing viruses.

The common cold can be spread by coming into contact with infected people or contaminated surfaces. The cold virus can live on objects such as telephones, PC keyboards, and door handles for several hours. The common cold can be contracted by touching one of these objects harbouring a cold virus.

Professionals and office workers can spend at least 6 hours per day working with PC's and other office equipment. In many cases, PC's, mice, telephones etc. are shared. The more people using them, the more viruses & bacteria they collect. Resulting in a high probability that a cold or flu will be passed on by a sick co-worker.

USB - PS/2 Combi

To suit your connection requirements

Water Proof & Spill Proof

9 Specially designed holes allows liquid to pass straight through the keyboard preventing damage from spillages

Fully Submersible Circuit board & membrane are completely sealed allowing keyboard to be fully submersed & washed

Anti-Bacterial Coating inhibits the growth of bacteria helping prevent the spread of germs, bugs & flu viruses

Noise Free & Laser Printed Keys

High quality membrane ensures noise free operation for a quiet typing environment
